

## Dependency diagram and network path for user stories Sprint 2

For sprint 2, our focus is on the donation feature for donors to donate to homeless youth. The critical path is the creation of donation goals (19, 86) and allowing donors to donate directly to individuals (2).

So, most of our tasks for sprint 2 depended on completing all the features for sprint1. Most of them rely on the feature that allows donors and homeless youth to login to our app. We managed to keep everything as planned and scheduled it well by applying the things we learned from sprint 1. For this sprint, everyone did their part very well and everyone understood what other people were doing, which makes it even easier for us to cooperate with one another.
